

Figure 1: Home page

Figure 2: Adding a player

Figure 3: Creating a new game

Figure 4: Creating a new game with Elo rating

```
path: "/home/{{ ansible_user }}/elevation/config/
database.yml"
insertafter: " database: elevation_test"
line: " username: pguser\n password: pguser123"

- name: bundle install
  shell: "{{ rbenv_root }}/shims/bundle install"
```

```
args:
  chdir: "/home/{{ ansible_user }}/elevation"
```

```
- name: Create database
  shell: "RAILS_ENV='development' {{ rbenv_root }}/shims/
bundle exec rake db:create"
args:
  chdir: "/home/{{ ansible_user }}/elevation"
- name: Migrate database
  shell: "RAILS_ENV='development' {{ rbenv_root }}/shims/
bundle exec rake db:migrate"
args:
  chdir: "/home/{{ ansible_user }}/elevation"
```

The above playbook can be executed as follows:

```
$ ansible-playbook -i inventory/kvm/inventory playbooks/
configuration/elevation.yml --tags elevation -vv -K
```

You can then log in to the VM, and manually start the RAILS application using the following command:

```
$ cd elevation
$ RAILS_ENV="development" bundle exec rails server
--binding=192.168.122.244
```

The application will listen on 192.168.122.244:3000, which you can open in a browser on the host system. You will see the home page, as shown in Figure 1.

You can add a player by providing the name and e-mail address, as shown in Figure 2.

You can start a new game using the Trueskill rating system, as shown in Figure 3.

You can also create a new game with the Elo rating system, as shown in Figure 4.
