LESS

LESS is an open source style sheet language, which has a syntax similar to that of CSS. It is the pre-processor of CSS. We can speed up the Web app development process using LESS as it comes with a number of outstanding features like making CSS extendable, themeable and maintainable. Other amazing features include functions variables, mixins and some other important techniques.

Atom

Atom is one of the best open source text editors one can find right now. We can easily carry out different cross-platform editing work with it. With Atom, the development of Web apps becomes much quicker as it has the support of AngularJS, Jshint, a built-in package manager, smart auto-completion, turbo-JavaScript, and Atom TypeScript.

Firebug

Firebug is one of the important tools being used today. An extension for Mozilla Firefox, it helps in carrying out tasks on a live Web page—like debugging as well as editing HTML, JavaScript and CSS. This open source tool was developed by Joe Hewitt and it comes with a variety of features, such as:

- Managing cookies
- Tweaking CSS for perfection
- Finding errors quickly
- Checking the DOM
- Inspecting and editing the HTML section
- Monitoring the activity on the network
- Visualisation of CSS metrics

Ember.js

Ember.js, developed by Yehuda Katz as an open source JavaScript framework, is actually based on the MVC (Model-View-Controller) pattern. This framework is widely used to design single page websites, while being fairly competent in developing complex Web apps, too. It can be used on multiple platforms.
