Universal Type C docking station from Targus

Targus, a manufacturer of mobile computing devices and gadgets, has launched its Universal Type C docking station in India. The device offers distinctive features such as power pass-through and a USB-C travel dock to easily connect to a laptop or monitor, wireless keyboard or mouse. The device also enables a user to transfer power from a power adapter to the host computer.

The docking station allows users to expand a laptop into a workstation by simply plugging in peripherals into the two USB-A ports, and easily connect to the conference room while setting up a presentation.

The docking station is fitted with a USB-C DisplayPort and an Alt-Mode host connection. It also has 1 Gigabit Ethernet and a 3.5mm mini stereo jack.

Offering power delivery up to 60W, the docking station has a travel-friendly design, enabling users to access essential connectivity ports packed into a compact dock. Fitted with two USB 3.0 ports to plug in external hard drives, mice, card readers, etc, the docking station is compatible with popular operating systems like Windows, Linux, Android, etc.

The Targus Type C docking stations are available through authorised retailers and e-commerce portals.

A wireless range booster from DIGISOL

DIGISOL, a leading player in the networking industry and a subsidiary of Smartlink Holdings Ltd, has launched its new 300Mbps wireless universal repeater -- the DG-WR3001NE. The device enhances the Wi-Fi range and improves the signal quality of the existing network.

It enables users to download, share and experience uninterrupted multimedia within the LAN even in the remotest corner of a home or office. The device can work as an access point, repeater and a wireless client. With a compact design and integrated power adapter, the device is easy to plug directly into an electrical outlet, which reduces the hassle of cables. The repeater supports the latest IEEE802.11n standard and

is backward compatible with the IEEE802.11b/g standard.

The device provides robust wireless security to protect sensitive data from hackers and maintain the confidentiality of the network, which is achieved by using security protocols ranging from 64/128-bit WEP encryption to WPA2 Enterprise. Additionally, the device supports the WPS function, which simplifies the procedure of setting up a secured wireless network.

The DG-WR3001NE can wirelessly be associated with another WPS enabled network device, securely, by simply pressing the WPS button on the unit.

The device is available at a pocket-friendly price online and at retail stores.
