

“HYPER-CONVERGENCE ALLOWS SEAMLESS DEPLOYMENT AND TESTING OF **OPEN SOURCE** **APPLICATIONS**”

Although an emerging concept in India, hyper-convergence is attracting a number of IT service providers, developers, analysts and data centre operators, thanks to its ability to enhance business agility and reduce data centre operation costs. While it is simple, easy to manage and far more cost effective compared to the traditional data centre architectures, Indian firms need to be clear about who should invest in this technology and why, before jumping on to the hyper-convergence bandwagon. *Sreemoyee Chatterjee* from *OSFY* and *Rajesh Ramnani*, regional director at Converged Platforms and Solutions Division (CPSD), Dell EMC, India, discuss the various aspects and benefits of hyper-convergence.
