

Figure 1: Mining user behaviour on e-commerce websites

- It also has examples of all the above-mentioned algorithms.
- Mahout has great community support, which cannot be found for any other open source ML library.

Applications of the Mahout framework

- IT giants like Facebook, LinkedIn, Adobe, Twitter and Yahoo! use Mahout.
- Foursquare uses the Mahout recommender engine to serve you by finding the places, entertainment options and food to your liking, in a specific area.
- User interest can be modelled, and Twitter uses Mahout for that.
- The pattern mining of the Mahout framework is used by Yahoo! **END**

Continued from page no...66

```
6.     ArrayList<String> s1 = hm.get(key);
7.     DefaultMutableTreeNode Node2 = null;
8.     for(String node: s1){
9.         Node2 = new DefaultMutableTreeNode(node);
10.        Node1.add(Node2);
11.    }
12.    root.add(Node1);
13. }
14. add(tree1);
15. return tree1;
16. }
```

We have created a GitHub public repository for the source code for the inheritance tree builder. Interested developers can download this from https://github.com/EpuriLaxmiNiharika/Inheritance-Tree-builder_for-java-codes.

Given *javasymbolsolver* as the input package to the inheritance tree builder, the output is as shown in Figure 3.

To summarise, Inheritance Tree Builder is a tool that visualises all the classes, inner classes and inheritance relations among classes in the form of a tree structure that provides developers with a quick understanding of

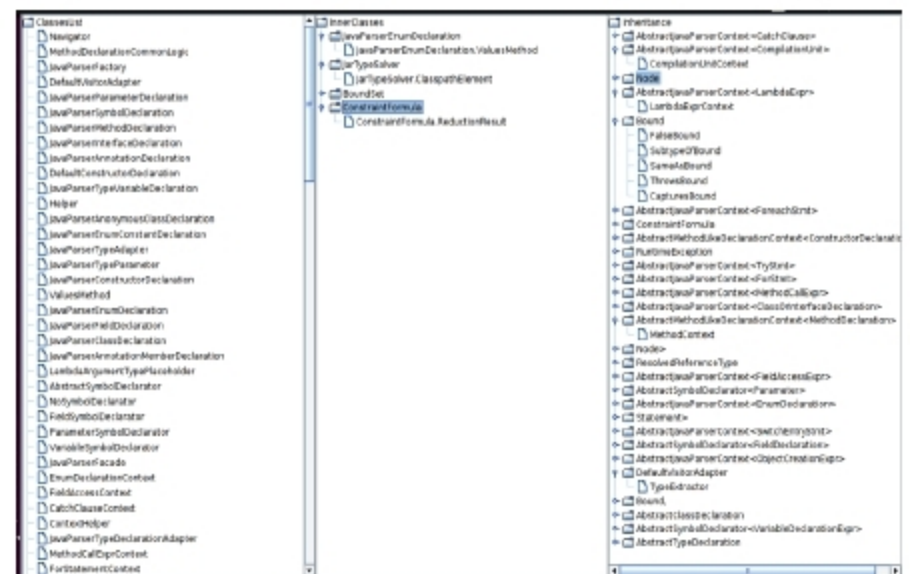

Figure 3: Output GUI

the Java input package. This tool can be enhanced by adding hyperlinks on each node of the tree such that, on clicking the node, it navigates to the respective part of the code. **END**
