

AT&T has disclosed its goal as enabling organisations of all sizes with cyber security solutions. Small and medium-sized businesses can benefit from this portfolio expansion.

The acquisition will result in a combination of threat intelligence and cyber security solutions. The companies suggested that the provision of cyber risk management strategies can reduce risks across the digital ecosystem.

The transaction is expected to close in the third quarter of 2018.

HTC's blockchain phone is to arrive soon!

It's a less than a stellar time for the blockchain. Cryptocurrency prices are low, and recently, Bitcoin was linked to reports of price manipulation. Amidst such news, HTC has announced that it is working on a blockchain-powered smartphone called the Exodus.

HTC envisions that with your phone as the hub, you hold your own keys, and you own your identity as well as your data. A phone where you can own your identity is a little further in the future, while the one coming out by the end of the year will be a phone with a wallet and a partnership with CryptoKitties. Details on the device's specs are yet to be announced.

The Exodus will be available globally (except in China). In the long term, the company hopes to find a more efficient way to mine cryptocurrency on the mobile, by working with in-house experts. Mining on mobiles will take time to figure out, but the company is already looking at different consensus protocols that might make this happen, and soon a white paper will be released with more details.

The idea of a blockchain-powered phone came about after watching Ethereum and the DAO closely since 2015. HTC floated the idea, and by the end of last

TechM plans a blockchain centre within its R&D arm

Tech Mahindra will set up a blockchain centre within its R&D arm, Makers Lab, at its Hyderabad facility. The firm has unveiled the Tech Mahindra BlockGeeks programme in its Hyderabad campus to develop competency in blockchain technology and it is targeting to train about 3,000 BlockGeeks.

In the first phase of this programme, the company will upskill a batch of 20 eligible candidates to make them blockchain-ready and will gradually roll out the programme globally. Candidates will undergo comprehensive training in the lab, after which they will be required to set up code, create smart contracts and build solutions, thereby gaining technical proficiency in blockchain technology.

The Makers Lab is an R&D hub for the co-innovation of solutions and services of the future with customers, partner companies, research institutions, universities and start-ups. This lab will facilitate collaboration between academia, research labs and partners so that the young tech enthusiasts of today can get trained on these disruptive technologies and become future ready.

The development work carried out in the Makers Lab is focused on next-generation technologies such as artificial intelligence, machine learning, robotics, the Internet of Things, augmented reality, virtual reality, 5G networks of the future, etc.
