

duration, links, predecessors and resources. It also creates budgets and effectively manages expenses.

- **Advanced project management functionality:** ProjectLibre can handle single as well as multiple projects with a wide set of tools like a calendar and user interactive Gantt charts; it provides powerful scheduling and hierarchy features. It also provides templates for quick starts, and supports user stories and version control for agile methods. It keeps track of records and history, and provides other features like PERT charts, network diagrams and other budgeting features.
- **Advanced collaboration, issue tracking and other features:** ProjectLibre supports enhanced social media linkage, forums, Web conferencing, etc. It also supports code integration and multiple workflows for issue tracking. It can even export PDFs without any restrictions. ProjectLibre will soon support ProjectLibre Cloud,

with a similar interface as Google Cloud, which will enable users to manage and create projects anytime and anywhere, in the browser.

Latest version: 1.7

ODOO

ODOO, a comprehensive all-in-one project management software, was designed by Fabien Pinckaers and is packed with a complete suite of enterprise management applications. It is an all-in-one business software, which includes CRM, website/e-commerce, accounting, manufacturing, warehousing, project management, inventory, etc. The complete source code of ODOO is available on GitHub under AGPLV3.

ODOO consists of an application server, which uses PostgreSQL as its backend database with a Web based client. It is written in Python, with a highly modular design, which allows rapid development of new modules through Open Object RAD. In addition, ODOO consists of 30 core modules and 3000+ community modules. It also provides strong technical support, as well as support for bug fixing and new development, apart from other services.

Features

- **Interactive user interface:** ODOO provides an interactive user interface, which is mobile friendly to track projects and perform tasks easily. It also has a fully customisable project process that can filter tasks in a smart way.
- **Project tasks:** This feature comprises a comprehensive set of project management tasks like customised Kanban view, Gantt charts, graphs, pivot table analysis, time tracking, document management, multi-project management and calendar deadlines.
- **Enhanced communication features:** These include features like email integration, custom alerts, user chat groups, live collaboration and activities logs.
- **Customer services:** ODOO is fully equipped with timesheets, forecasts and a customer portal for successful project implementation.
- **Project reporting:** This software is tightly integrated to provide enhanced project management reporting features like dashboards, tasks analysis and issues analysis.
- **Smart integration:** ODOO has powerful APIs that do almost everything, and it integrates with Google Docs for linking all the documents and advanced accounting features.

Wekan

Wekan is free, open source project task management and collaboration software that uses the Kanban approach for simple and fast workflow. With Wekan, project managers can create boards on which cards can be dragged around between columns. It is very easy to use and has interactive project management software. After the creation of boards, users need to simply add the project team to the project and everything is set to take off.

Wekan is released under the MIT License and is open for modifications and enhancements. It gives users full control over their data and can be hosted on the server. The Wekan community consists of over 400,000 members, which means there is a vibrant community working towards further improvements.
