

The Top Twelve Open Source Projects of 2017

2017 has been a year in which open source software has flourished. This presentation offers a bird's eye view of the past year's best offerings in software.

One of the world's most reputed technology research firms, Gartner, had predicted early in 2017, that the next decade would be spurred by a whirlwind of advances undergirded by a focus on 'artificial intelligence everywhere', 'digital platforms' and 'transparency'. Little did we know that the prediction would ring true from the following month itself.

It has been a landmark year for open source! We are on the cusp of a revolution, poised at the frontiers of the technological rebirth of our world, triggered by a spectrum of possibilities that are opening—from 5G to blockchain – all of which are influencing businesses to adopt a decentralised approach in an effort to keep up with the times.

With the game changing results provided by deep learning algorithms, the tech industry is paying close attention to all the possible use cases. From Google and Uber to Baidu and Tesla, almost every major tech company has invested heavily in applying such practices in a bid to improve their offerings and introduce novel features for the consumer.

The recent hype also sent cryptocurrency prices soaring, before these are plummeted back to reasonable levels. The

2017 Christmas season was peppered with initial coin offerings, as entrepreneurs went all out to harness positive public sentiments and channel these into VC funding. In fact, the largest players in the financial market have set up consortiums to look at how these technologies can be incorporated into their business models in the current climate. All this could lead to radical changes in the rather archaic and constrained institutions that have driven the fiscal aspects of our lives thus far.

So, all in all, it's been a highly transitive year as we move into a decade that will resonate with pervasive artificial general intelligence. We need to come to terms with a huge leap from the status quo into bleeding edge technology.
