

2. Joomla

Joomla is an open source free CMS platform similar to WordPress, and is the most popular framework after WordPress. Joomla is also built on PHP. Joomla's installation is not as quick as WordPress, but it's not too tough either. There are lots of menus in Joomla compared to WordPress. Many people think that Joomla is more powerful than WordPress. Overall, anyone can opt for Joomla, since it is a stable and popular framework. In the case of Joomla, too, you can host your website on it by downloading the Joomla framework and creating self-hosted websites.

The official website for Joomla is <https://www.joomla.org/>.

3. Drupal

Drupal is another open source CMS framework like Joomla and WordPress. Drupal's installation is also similar to Joomla and WordPress. There is an installation script which will install the framework. It also offers different distributions. Drupal bundles are used to create specific kinds of websites. Drupal is a bit complicated after installation. Beginners find it difficult compared to other popular CMS systems, when it comes to changing components of the websites.

The official website for Drupal is <https://www.drupal.org/>.

All the above three CMS platforms are very popular and there are many similarities between them.

- WordPress, Joomla and Drupal are free and open source PHP based frameworks, licensed under GPL.
- All three support MySQL as the primary database.
- There are different themes, bundles and modules available to add different features and functionalities.
- All are community driven projects with very good support.
