system. We can create beautiful websites using OpenCms, which is also open source software.

The official website for OpenCms is <http://www.opencms.org/en/>.

5. Orchard Project

Orchard Project is a free, open source CMS built on the ASP.Net MVC platform. It is also a community driven project. Some of the features of this CMS are modularity, security, multi-lingual support, and being multi-tenant based; we can also create workflows to trigger specific jobs.

The official website for Orchard Project is <http://www.orchardproject.net/>.

6. concrete5

concrete5 is a free and open source CMS that is coded in MVC (model-view-controller) software architectural pattern with an object-oriented language. It is secure, flexible, SEO friendly and mobile ready. It also has a marketplace. It has a medium-sized community base and support.

The official website for concrete5 is <https://www.concrete5.org/>.

7. SilverStripe

SilverStripe is a free and open source CMS framework for creating websites. It's a PHP based framework, which also provides a WYSIWYG website builder. It is not as popular as WordPress, Joomla and Drupal.

The official website for it is <https://www.silverstripe.org/>.

8. MODX

MODX is also a free and open source PHP based framework for publishing content on content on the World Wide Web and intranets.

The official website is <https://modx.com/>.

9. django CMS

As the name suggests, django CMS is based on Django as well as Python.
