

Analysis tools

In addition to the general-purpose tools explained above, there are some scientific computing and analysis tools. Enumerating the complete list of all such tools is out of the

Table 1

Tool	Description
GNU PSPP www.gnu.org/ software/pspp	This is a very popular tool for statistical analysis and is available completely free. The corresponding proprietary counterparts are costlier and have a restriction on the number of licences.
SciLab http://scilab.io	This is a FOSS tool associated with scientific computing problems.
Weka https://www. cs.waikato.ac.nz/ ml/weka/	Weka is a collection of machine learning algorithms for data mining tasks. Its advantage is that it can be harnessed by researchers from non-computer science domains also, as it doesn't require any coding skills.

scope of this article; however, Table 1 features some of them.

As stated at the beginning of the article, it would be impossible to cover all the tools that enhance scholarly academic research. This article has just thrown some light on the various dimensions of academic research and the corresponding FOSS tools that can be used to improve research productivity.
