

Figure 9: Network modes

To list VMs

Execute the commands given below in a terminal to list all the registered VMs:

```
$ VBoxManage list vms
"Mint-18" {e54feffd-50ed-4880-8f81-b6deae19110d}
"VM-1" {37a25c9a-c6fb-4d08-a11e-234717261abc}
"VM-2" {03b39a35-1954-4778-a261-ceeddc677e65}
"VM-3" {875be4d5-3fbf-4d06-815d-6cecfb2c2304}
```

To list groups

We can also list VM groups using the following commands:

```
$ VBoxManage list groups
"/"
"/VM Group"
```

To show VM information

We can use the `showvminfo` command to display details about a VM. For instance, the command given below provides detailed information about the VM. It accepts the VM's name as an argument.

```
$ VBoxManage showvminfo Mint-18
Name:           Mint-18
Groups:         /
Guest OS:       Ubuntu (64-bit)
UUID:           e54feffd-50ed-4880-8f81-b6deae19110d
Config file:    /home/groot/VirtualBox VMS/Mint-18/Mint-18.vbox
Snapshot folder: /home/groot/VirtualBox VMS/Mint-18/Snapshots
Log folder:     /home/groot/VirtualBox VMS/Mint-18/Logs
Hardware UUID:  e54feffd-50ed-4880-8f81-b6deae19110d
Memory size:    1024MB
Page Fusion:    off
VRAM size:      16MB
```

Note: The remaining output is not shown here, in order to save space.

To turn on the VM

VBoxManage provides a simple command to start the VM. It accepts the VM name as an argument.

```
$ VBoxManage startvm Mint-18
Waiting for VM
"Mint-18" to power on...
VM "Mint-18" has been successfully started.
```

To turn off the VM

The `controlvm` option supports various actions like pause, reset, power-off, shutdown and so on. To power off the VM, execute the command given below at a terminal. It accepts the VM name as an argument.

```
$ VBoxManage controlvm "Mint-18" poweroff
0%...10%...20%...30%...40%...50%...60%...70%...80%...90%...100%
```

To unregister VM

The command given below can be used to unregister a VM. It accepts the VM's name as an argument.

```
$ VBoxManage unregistervm "Mint-18"
```

To register VM

The command given below can be used to register a VM. It accepts the VM's file name as an argument.

```
$ VBoxManage registervm "/home/groot/VirtualBox VMS/Mint-18/Mint-18.vbox"
```

To delete VM

To delete a VM permanently, use the `--delete` option with the `unregistervm` command. For instance, the following command will delete the VM permanently.

```
$ VBoxManage unregistervm "VM-1" --delete
0%...10%...20%...30%...40%...50%...60%...70%...80%...90%...100%
```

VBoxManage provides many more commands and covering them all is beyond the scope of this tutorial. Anyway, you can always dig deeper into this topic by referring to VirtualBox's official guide. To view all supported commands and their options, execute the following command in a terminal:

```
$ VBoxManage --help
```
