

The Ionic Framework: A Front-end SDK *for* Speedy, Cross-Platform App Development

Ionic enables developers to build and deploy high calibre mobile apps for any platform using a single codebase. It is free and open source, and provides a stable, fast and reliable environment for developing mobile apps. Developers using Ionic can concentrate on the app's behaviour rather than waste time in designing UI elements.

Ionic is a free and open source SDK framework which is largely used by developers to build mobile applications. It provides a wide variety of tools and services through which we can build high-quality mobile applications using Web technologies like HTML, CSS and JavaScript. It primarily deals with UI interactions and the look and feel of various applications. It is not a substitute for any JavaScript framework or for Cordova. It is a front-end SDK built upon Cordova and AngularJS, and is widely used for personal and commercial projects because it is free and open source.

Reasons to use the Ionic framework for mobile app development

It is open source and free: Ionic is an open source and free SDK framework. It provides a stable, faster and reliable environment for developing mobile applications. No licence need be purchased to build enterprise applications.

Moreover, details can always be tracked regarding bugs, issues and anything else that the Ionic team is working on. Requests can be initiated to fix any issue on the Ionic GitHub repository. It is well supported by investors, its parent company and the community. Due to great support, there is no chance of it being abandoned, which often happens with many open source frameworks. These reasons highlight why Ionic is a good choice for mobile app development.
