

Advantages

1. Node-Red is a versatile tool.
2. It plays a vital role in IoT solutions.
3. It is indispensable for quick and effective solutions to a wide variety of problems, and even as a platform for our IoT projects.
4. There is no licence cost associated with it.

ProcessMaker

ProcessMaker is a free, open source and Web based workflow development as well as deployment system. It is fairly easy to learn and use. It keeps track of the different workflows of the network by evaluating all the possible final outcomes of that workflow. Bitnami offers different ready-made installers for all the major operating systems to make the use of ProcessMaker easier. It just needs a cloud installer and a virtual machine.

Features

1. It runs on all the major platforms such as Linux, Windows, MacOS, OpenShift, Google Cloud, and Cloud Foundry, as well as on several Java EE application servers.
2. ProcessMaker also comes in premium editions with extra features and support available in it. But if we consider it for internal purposes and testing, then the community edition is quite useful and powerful.

3. We can access ProcessMaker applications through a Web browser, and all of its content is automatically mobile-ready.
4. If we want to make a form available through a link, we can embed it in a custom Web page. ProcessMaker provides the detailed documentation on how we can do this.
5. It also supports conditional routing of the workflow.
6. ProcessMaker provides dashboards on which we can install widgets to report different key performance indicators.
7. It can be extended by programming in JavaScript.

Advantages

1. ProcessMaker is fairly easy to learn and use.
2. Its efficiency can be increased manifold by programming.
3. It can save us a lot of time while solving workflow problems. **END** 🐧
