

Figure 5: Web based Icinga 2 interface for setup

Now go to the *Time Zone* setting, set *remove ‘;’* to *active* and type the zone name, i.e., the country and city in which you are residing, to complete the command based configuration (for example: Asia/Ho_Chi_Minh). Press *Control x* before saving and exiting the editor.

Part 2: Web based configuration of Icinga 2 and Icinga Web 2

In order to start using Icinga Web for network monitoring, it is important to configure the Icinga 2 Web interface using a Web based process. And before proceeding with opening the website, a setup token is required.

Step 9: Creating a setup token

In order to generate the token, issue the following command:

```
#icingacli setup token create
```

Step 10: Start the Web interface link to finalise the next installation and configure Icinga for network monitoring. Open the following link in the Web browser: <http://<ipaddress>/icingaweb2/setup>

Step 11: Type the token in the ‘Set up token’ space, and click ‘Next’.

Step 12: Enable the monitoring module and click ‘Next’.

Step 13: In order to ensure that the setup continues in the proper manner, without any errors, verify the PHP setting and click ‘Next’ to continue.

Step 14: Select ‘Authenticating Method’ as the database to access Icinga Web 2, configure specific backup details and click ‘Next’.

Step 15: In order to ensure that Icinga 2 connects to the MySQL database, fill in the necessary details as follows:

- **Database type:** MySQL
- **Host:** ‘Hostname’ or Localhost (if any hostname) or ‘Server name’
- **Database name:** icingaweb_users
- **Username:** admin
- **Password:** Type the password created while setting up Icinga. Then click ‘Next’ to proceed.

Step 16: After entering the database configuration details, set up the database. Enter the following details.

Username: root

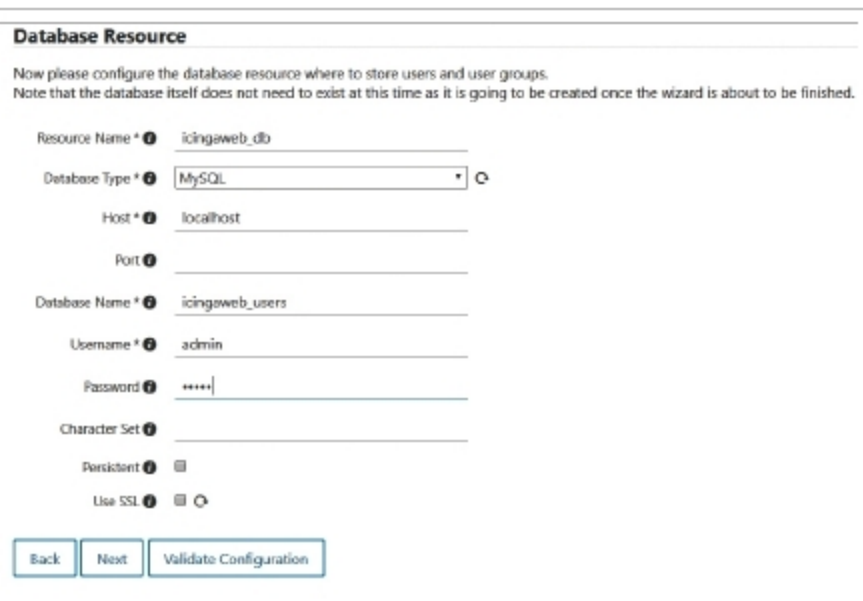

Figure 7: Database configuration details

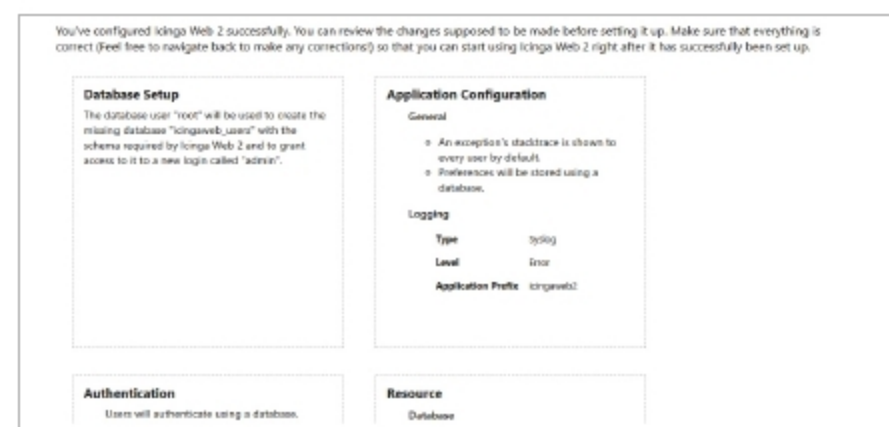

Figure 8: Settings review

Password: This has been created during the initial setting up of the Icinga database installation.

Step 17: Select ‘Authentication backend’. Then type *icingaweb2*, and click *Next*.

Step 18: To create Icinga 2 Web administration user logins, type the following information.

Username: admin

Password: Any password of your choice

Step 19: To perform ‘Application Configuration’, choose the preferred storage type, application prefix and facility. Then click *Next* to continue.

Step 20: After making all the above settings, Icinga 2 can help administrators to review them. If all is fine, click *Next*, or the user can go back to make any changes needed in the settings.

Step 21: Configure the monitoring module for Icinga Web 2. Click *Next* to continue.
