

Monitoring IDO Resource

Please fill out the connection details below to access the IDO database of your monitoring environment.

Resource Name *

Database Type *

Host *

Port *

Database Name *

Username *

Password *

Character Set *

Persistent ☐

Use SSL ☐

Figure 9: Configuring the monitoring IDO resource

You've configured the monitoring module successfully. You can review the changes supposed to be made before setting it up. Make sure that everything is correct (Feel free to navigate back to make any corrections) so that you can start using the monitoring module right after it has successfully been set up.

Monitoring Backend

Icinga Web 2 will retrieve information from your monitoring environment using a backend called "icinga" and the specified resource below:

Database Resource

Resource Name

Database Type

Host

Port

Database Name

Username

Password

Command Transport

Icinga Web 2 will use the named pipe located at "/var/run/icinga2/cmd/icinga2.cmd" to send commands to your monitoring instance.

Figure 10: Monitoring module review configuration

Congratulations! Icinga Web 2 has been successfully set up.

Account "admin" has been successfully created.
Account "admin" has been successfully defined as initial administrator.

User Group Backend configuration has been successfully written to: /etc/icingaweb2/groups.ini
User Group "Administrators" has been successfully created.
Account "admin" has been successfully added as member to user group "Administrators".

Resource configuration has been successfully written to: /etc/icingaweb2/resources.ini
Monitoring backend configuration has been successfully written to: /etc/icingaweb2/modules/monitoring/backends.ini
Resource configuration has been successfully updated: /etc/icingaweb2/resources.ini

Command transport configuration has been successfully created: /etc/icingaweb2/modules/monitoring/commandtransports.ini
Monitoring security configuration has been successfully created: /etc/icingaweb2/modules/monitoring/config.ini
Module "monitoring" has been successfully enabled.

[Login to Icinga Web 2](#)

Figure 11: Successful installation of Icinga 2 and Icinga Web 2 on Ubuntu 17.10

Step 22: To configure the monitoring backend, get the default values selected and click *Next* to continue.

Step 23: To configure the monitoring IDO resource, type the following details.

Database type: MySQL

Host: Localhost

Database name: icinga2

Username: root

Password: Type the one created by the user during setup

Click on 'Validate configuration' to check, and then on 'Next' to continue.

Step 24: In the next window, the user will be greeted with *Command Transport*. Click *Next* to continue.

Figure 12: Login page of Icinga Web 2

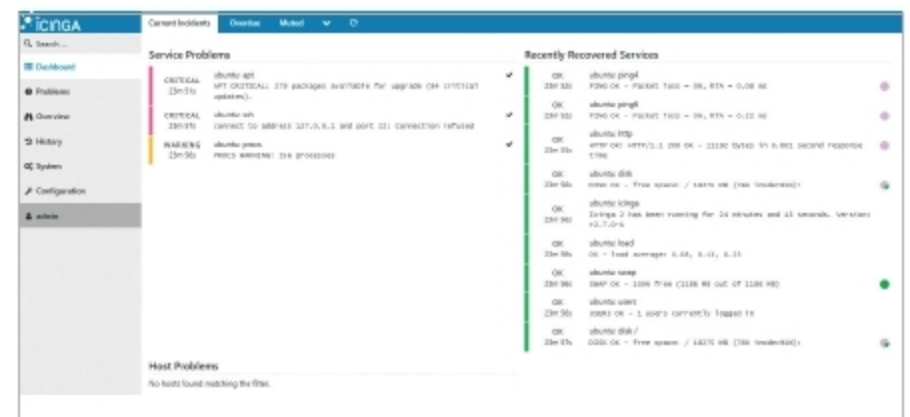

Figure 13: Icinga Web 2 dashboard

Step 25: Configure monitoring security. Click *Next* to continue.

Step 26: In the next window, administrators can review all the monitoring module configuration options (Figure 10). If all is okay, click *Next*, or you can go back to any option for any sort of change.

On clicking *Next*, the window shown in Figure 11 will confirm the successful installation of Icinga 2 and Icinga Web 2 on Ubuntu 17.10.

Step 27: Icinga 2 Icinga Web 2 ready are now ready to be launched. Figure 12 shows the Home Page of the Icinga Web 2 monitoring solution.

Step 28: Type the username as 'Admin' followed by the password and click 'Login'. You will be presented with the dashboard of Icinga Web 2 on which you can start with network monitoring.

Icinga 2 and Icinga Web 2 have now been successfully configured on Ubuntu 17.10. **END** 🐧
