

Create User *nagios* and *www-data*. Add *www-data* to the Nagios group, as follows:

```
$sudo useradd nagios
$sudo usermod -a -G nagios www-data
```

Install binaries, HTMLs and CGIs by giving the following command:

```
$sudo make install
```

Install and configure the service or daemon that has to start on booting up, as follows:

```
$sudo make install-init
$sudo update-rc.d nagios defaults
```

Next, install the **SAMPLE** configuration files to allow Nagios to start:

```
$sudo make install-config
```

Install the Apache Web server configuration files and configure Apache settings, as shown below:

```
$sudo make install-webconf
$sudo a2enmod rewrite
$sudo a2enmod cgi
```

Configure the firewall to allow Port 80 inbound traffic on the local firewall in order to reach the Nagios Core Web interface, as follows:

```
$sudo ufw allow Apache
$sudo ufw reload
```

Create an Apache user account to be able to log into Nagios. This user name and password would be used to log in to the Nagios Web page:

```
$sudo htpasswd -c /usr/local/nagios/etc/htpasswd.users
nagiosadmin
```

Restart Nagios Core and Apache Service, as follows:

```
$sudo systemctl restart apache2.service
$sudo systemctl start nagios.service
```

To test how Nagios Core works, open the Nagios Web client in the browser at <http://<ip address or FQDN>/nagios>. The page that appears is shown in Figure 1.

The host and services page will display errors as there are no plugins installed, but once they are, these errors will get resolved. Here are steps to install plugins from the

Figure 1: Nagios Web UI

Nagios Plugin Package.

Download the prerequisites as follows:

```
$sudo apt-get install -y autoconf gcc libc6 libmcrpt-dev make
libssl-dev wget bc gawk dc build-essential snmp libnet-snmp-
perl gettext
```

Next, download and compile the source, and install the plugins:

```
$cd /tmp
$wget --no-check-certificate -O nagios-plugins.tar.gz https://
github.com/nagios-plugins/nagios-plugins/archive/release-
2.2.1.tar.gz
$tar xzf nagios-plugins.tar.gz
$cd /tmp/nagios-plugins-release-2.2.1/
$sudo ./tools/setup
$sudo ./configure
$sudo make
$sudo make install
```
