> *Organize import.* You can select the appropriate option from the drop-down menu.

Useful keyboard actions

Eclipse provides shortcuts for almost every action. Let's look at a few widely used shortcuts.

- 1) To list all shortcuts, use *Ctrl + Shift + L*.
- 2) Eclipse can provide suggestions for code completion and the shortcut for this feature is *Ctrl + space*. For instance, one can type 'System' and then press *Ctrl + space*.
- 3) To move code up, place the cursor at any line and press *Alt + up arrow key*. This will move the current line up by one position. If you want to do this with multiple lines, then select the code block and press the *Alt + up arrow key*.
- 4) To move code down, place the cursor at any line and press *Alt + down arrow key*. This will move the current line down by one position. If you want to do this with multiple lines, then select a code block and press *Alt + down arrow key*.
- 5) The 'toggle comments' functionality is used to comment/uncomment source code. Select the code block and press *Ctrl + Shift + C*.
- 6) To delete a single line, place the cursor at any line and press *Ctrl + D*. If you want to do this with multiple lines, then select the code block and press *Ctrl + D*.
- 7) To go to a particular line, press *Ctrl + L*, which will lead to a window popping up, where you can enter the line number.
- 8) To show the type hierarchy, use *Ctrl + T*.
- 9) To show the outline of the current class, use *Ctrl + O*.
- 10) To maximise or minimise an active view, use *Ctrl + M*.
