

amount of power or type of hardware you have will not give you an advantage. Using simple functions, the network can verify that the winning validator did indeed 'win', by proving that it had the shortest time to wait before assuming the leadership position.

Proof of Elapsed Time is revolutionary in its ability to achieve distributed consensus using a lottery function. This not only allows for easy verification and fairness within the network, but also for incredible scalability. Without the heavy costs of participating in consensus, any block can participate in the network. One of Hyperledger Sawtooth's main advantages is that it allows the size of the network to scale, i.e., with PoET it can nearly support limitless nodes in the network.

Use cases

Hyperledger Sawtooth is a blockchain framework with potential in IoT, manufacturing, finance and enterprises. It supports diverse requirements, including both permissioned and permissionless deployments and a pluggable consensus algorithm. This framework also provides a revolutionary consensus algorithm, Proof of Elapsed Time (PoET), that allows for versatility and scalability suited for a variety of solutions which can be broadly classified with different infrastructural requirements, such as:

- Permissioned and permissionless infrastructure

- Modular blockchain architecture
- Scalability, which is good for larger blockchain networks due to higher throughput
- Many languages for transaction logic

Hyperledger Sawtooth is an open source project, where ideas and code can be publicly discussed, created and reviewed. All code is available on GitHub and there are a number of ways that you can get involved with the Hyperledger community, participate on the mailing lists, start or join a meetup or join the discussion on Rocket.Chat, as the following references indicate. **END** 🐧

THE BUSINESS MAGAZINE FOR ELECTRONICS INDUSTRY

Launched in February 2007, Electronics Bazaar, India's first B2B magazine aims at promoting the electronics industry. It covers the latest products, news, views, insights, opinions, and market trends from electronic components, products and machinery to manufacturing equipments segments.
