Kali Linux 2018.1 (64-bit live)

Kali Linux is a Debian-based Linux distribution designed for advanced penetration testing and security auditing. Kali contains several hundred tools that are geared towards various information security tasks apart from penetration testing, such as security research, computer forensics and reverse engineering. This fine release contains all updated packages and bug fixes since the 2017.3 release last November. Kali Linux 2018.1 has a shiny new 4.14.12 kernel. You can also find the ARM image in the *other_isos* folder on the root of the DVD. These images have a default password of 'toor' and may have pre-generated SSH host keys. Bareos—Backup Archiving Recovery Open Sourced

Bareos is a 100 per cent open source fork of the backup project from bacula.org. The fork has been in development since late 2010, and it has a lot of new features. The Bareos-appliance features a ready-to-use installation including the Web UI. It is easiest when used inside VirtualBox via the 'Import appliance' option. Currently, the appliance contains Bareos in version 16.2.4., which has been included in the DVD under the *other_isos* folder.

What is a live DVD?

A live CD/DVD or live disk contains a bootable operating system, the core program of any computer, which is designed to run all your programs and manage all your hardware and software.

Live CDs/DVDs have the ability to run a complete, modern OS on a computer even without secondary storage, such as a hard disk drive. The CD/DVD directly runs the OS and other applications from the DVD drive itself. Thus, a live disk allows you to try the OS before you install it, without erasing or installing anything on your current system. Such disks are used to demonstrate features or try out a release. They are also used for testing hardware functionality, before actual installation. To run a live DVD, you need to boot your computer using the disk in the ROM drive. To know more about how to set a boot device in BIOS, please refer to the hardware documentation for your computer/laptop.
