

SUSE Linux boosts business-critical computing with first live patching

SUSE has announced SUSE Linux Enterprise Live Patching for IBM Power Systems and SUSE Linux Enterprise Real Time 12 Service Pack 3, to maximise the availability and responsiveness of business-critical IT systems. Building on the success of live patching for the x86 platform, SUSE is the first to provide this for IBM Power Systems.

Today, the business success of many organisations depends on high availability and responsiveness of their enterprise IT systems. So SUSE is expanding its portfolio of business-critical computing infrastructure solutions that provide non-stop IT and workload predictability for these customers.

"Live patching for IBM Power Systems and the latest real-time updates provide more uptime and predictability in the enterprise data centre, which are essential to customers' ability to satisfy the demands of business-critical workloads," said Gerald Pfeifer, VP, products and technology programs at SUSE.

The live patching uses SAP HANA, running in the event of critical kernel security updates. Customers are demanding live patching as it helps them improve business continuity and lower costs by reducing downtime, increasing service availability, and enhancing security and compliance. The live patching function on SUSE Linux Enterprise Server is almost invisible, running without any reboots.

The SUSE Linux Enterprise Real Time 12 SP3 is an open source real-time operating system. It is designed to reduce latency, and increase the predictability and reliability of time-sensitive, business-critical applications with process and task prioritisation as well as scheduling.

Collabora Online 3.0 now suitable for large scale deployment

The driving force that took LibreOffice to the cloud, Collabora, has announced Collabora Online 3.0. This is a major release as it is a flagship enterprise-ready cloud document suite. Collabora Online 3.0 comes loaded with many new features and improvements.

The parent, Collabora Online, is a powerful LibreOffice-based online office suite allowing you to access document editing features through your Web browser. It is interoperable with all major document, spreadsheet and presentation file formats, and easy to integrate into your infrastructure. It allows you to stay in full control of your own data—on-premise or in the cloud.

So, what's new in Collabora Online 3.0? It has many improvements under the hood and lots of new features that make the collaborative editing experience even better. The company claims that when combined with one of its many partner solutions, Collabora Online is an excellent choice for enterprises wanting a powerful office suite for confidential documents on-premise, or for hosting and cloud businesses that wish to include online office suite functionality into their service offerings.

"Months of hard work from the Collabora team has made this release really impressive," said Michael Meeks, GM of Collabora Productivity. "The list of improvements and new features highlight the progress in our ongoing work to ensure that capturing the huge benefits of Web deployment doesn't have to mean sacrificing significant functionality," he added.

There were many smaller features and fixes released in the 2.1.x series over the last half a year; however, a number of larger feature improvements are offered in Collabora Online 3.0.

*asTECS ready with advanced enterprise communication solutions

*asTECS, a leading provider of enterprise telecom technology products and Asterisk based open source communications solutions, has showcased its latest product portfolio. This includes a mobile cloud telephony solution and a cloud-based voice logger.

Showcased at Convergence India 2018, these solutions enable contact centres and enterprises to deliver on-demand solutions, to effectively monetise their communication assets. They allow easy and efficient collaboration, improve compliance and impart better customer experiences for the users.

"Today, *asTECS is pioneering communication collaboration capabilities to integrate emerging technologies and redefine what's possible, with a wide range of transformative solutions," said Dr Devasia Kurian, CEO, *asTECS.

*asTECS' integrated portfolio of enterprise communication solutions delivers seamless connectivity, security and automation. With a strong focus on customer needs, these solutions serve users across the globe. The company continues to leverage its strong capabilities in product innovation, helping enterprises and SMEs capitalise on the latest in technology and, in turn, adapt to their customers' communications requirements and evolving market opportunities.

The company claims it offers the most comprehensive, integrated and compelling telecom infrastructure solutions based on the Asterisk platform. These solutions offer improved customer engagement and efficiency, increased conversions, augmented employee productivity, accelerated deliveries, reduced costs and higher revenue potential.
