

Winium: A Selenium Based Windows Automation Tool

Winium is a Selenium based tool for testing and automating desktop applications on the Windows desktop. It is easy to use for those who are familiar with Selenium.

We all know about Selenium, which is used to automate Web applications. Winium is the tool that is built on Selenium to interact with Windows applications. It is free and open source.

Using it is similar to working with Selenium; it's just that it is used for Windows desktop applications.

Just as we use Firebug and Firepath to identify the element locators for Web applications in Selenium, we are going to use tools such as *inspect.exe* or *UISpy* to identify the element locators in Windows applications.

Using Winium

Just as there are some prerequisites for Web app automation using Selenium, there are some prerequisites for working with Winium. We need the following:

- Microsoft .NET Framework 4.5.1
- Winium.Desktop.Driver.exe
- Some other dependencies that are downloaded using the Maven file, as mentioned in the POM file below:

```
<project xmlns="http://maven.apache.org/POM/4.0.0"
  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
  xsi:schemaLocation="http://maven.apache.org/POM/4.0.0 http://
  maven.apache.org/xsd/maven-4.0.0.xsd">
  <modelVersion>4.0.0</modelVersion>
  <groupId>WiniumDemo</groupId>
  <artifactId>WiniumDemo</artifactId>
  <version>0.0.1-SNAPSHOT</version>

  <dependencies>
```
