

```

1 // content of index.js
2 const http = require('http')
3 const port = 4000
4
5 const requestHandler = (request, response) => {
6   console.log(request.url)
7   response.end('Our Node.js Server works!')
8 }
9
10 const server = http.createServer(requestHandler)
11
12 server.listen(port, (err) => {
13   if (err) {
14     return console.log('Something went wrong!', err)
15   }
16   console.log('Our Server is listening on $(port)')
17 })

```

Figure 5: Creating a file called *index.js*

```

1 // content of app.js
2 const express = require('express')
3 const app = express()
4
5 app.get('/', (req, res) => res.send('Hello World!'))
6
7 app.listen(3000, () => console.log('Listening on port 3000!'))

```

Figure 6: Creating a file called *app.js*

```
$ node index.js
```

Navigate to 'localhost:4000' in your browser and view the message displayed.

Why Node.js is easier

We have built our own server from scratch, but the original claim was that

Node.js makes things faster by eliminating the need to write everything from scratch. Well, let's see how this is done.

We use a popular JS Web framework for Node.js, called 'Express':

```
$ mkdir mynewapp
$ cd mynewapp
```

```
$ touch app.js
```

```
$ npm init
```

The above command initialises a file called 'package'.

json' to keep track of the installed packages for your project.

Accept the default settings suggested by the command by pressing the 'Return' (Enter) key.

```
$ npm install express --save
```

Now open the *app.js* file and enter the content shown in Figure 6. Then run the following command:

```
$ node app.js
```

That's all you need. Navigate to 'localhost:3000' in your browser and watch the magic unfold!
