

with a bottom-layer firmware provided by KunLun. The Linux operating system includes integration with the optimised KunLun BIOS process that can automate the experience with user-mode tools.

"Having support and coordination from the bottom-layer hardware structural design and BIOS software sides is integral to SUSE's innovations around the OS RAS features," said Ralf Flaxa, president of engineering, SUSE.

In addition to the partnership with SUSE, Huawei has collaborated with others to solve issues related to disaster recovery, high availability and backup. This will make the new server a competitive model for enterprises.

SUSE has natively tied up with SAP to bring SUSE OpenStack Cloud and SUSE Enterprise Storage to the SAP Cloud Platform.

Facebook relicenses React to continue to charm devs

Weeks after facing criticism from the open source community, Facebook has decided to relicense its projects, including React, Jest, Flow and Immutable.js. The company is set to switch the developments from the existing BSD + Patents licence, and relicense them under the MIT licence.

React faced criticism due to its availability under the BSD + Patents licence. Several developers even switched to some close alternatives of the React system,

which ultimately impacted the company in the fast-growing world of open source.

"We're relicensing these projects because React is the foundation of a broad ecosystem of open source software for the Web, and we don't want to hold back forward progress for non-technical reasons,"

Facebook's engineering director Adam Wolff said in a blog post.

Facebook believes that the issuance of BSD + Patents licence provides "some benefits" to developers deploying its projects. However, the community is not on the same track and wants an unrestricted licence.

Among the leading critics was the Apache Software Foundation. The non-profit organisation even marked the Facebook BSD + Patents licence under its Category X, and restricted access to React across its entire open source portfolio.

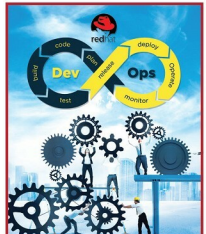

"We're sorry for the churn," asserted Wolff, adding that Facebook doesn't want to leave the door open for developers to move to any alternatives now.

React 16 will be the first open source project by Facebook to include the licence update. This new version is a year-long effort of Facebook's development team and is completely rewritten.

Even though Facebook has moved React and the other major projects to the MIT licence, it continues to keep the BSD + Patents licence for now. Wolff mentioned that since each project is different, alternative licensing options will depend on a variety of factors.

Baidu develops open source deep learning framework for smartphones

Chinese Internet giant Baidu aims to get bigger in the world of artificial intelligence (AI) by launching its open source mobile deep learning framework. Called Mobile
