

Electronics Projects Vol. 26 is the latest volume in the series, available in digital form.

It is a compilation of 21 construction projects and 71 circuit ideas published in Electronics For You magazine.

This collection of tested circuit ideas and construction projects in a handy volume would interest all classes of electronics enthusiasts—be they students, teachers, hobbyists or professionals!

Electronics Projects Vol. 26 is available on the following digital magazine stores:

- www.lulu.com
- www.magzter.com
- Createspace.com
- www.readwhere.com

Deep Learning (MDL), this convolution-based neural network uses the image sensor on Android and iOS mobile devices to recognise objects.

MDL's neural network has low complexity and high speed. Interestingly,

the new model is also designed to use the GPU on iOS devices to enable calculations through the network. This takes Apple devices a step ahead of the Android models.

A couple of demonstrations put up by Baidu on the GitHub repository show its different features. The first demonstration reveals that MDL is capable of recognising an object in less than a second. The second demo shows the project's ability to identify an object from an image and find suitable matches from the Web.

While MDL does support developments made on UC Berkeley's deep learning framework Caffe, Baidu recommends that developers use its PaddlePaddle platform that was launched last year. Users can convert their existing PaddlePaddle model to an MDL project using simple Python skills. Baidu has also given support for projects such as MobileNet, SqueezeNet and GoogLeNet.

MDL is available on GitHub under the MIT licence.

Infosys picks SUSE OpenStack to build private cloud solution

Infosys has launched a private cloud solution by partnering with open source pioneer Micro Focus SUSE. The latest development leverages SUSE OpenStack to help businesses move towards their digital transformation journey.

The new announcement bolsters the existing relationship between the two companies, and positions Infosys as a strategic Global Platinum partner for Micro

Focus SUSE, backed by more than 500 architects and consultants with data centre transformation and migration capabilities.

"We believe that this collaboration will impact businesses positively and help them propel their digital strategy especially in sectors such as financial services, life sciences, retail, manufacturing, energy and utilities," said Ravi Kumar, president and deputy chief operating officer, Infosys, in a joint statement.

Infosys and Micro Focus SUSE have jointly invested in a centre of excellence to develop validated reference architectures, accelerators and factory-based migration solutions. The new partnership will give a boost to that centre and enhance private cloud adoption among enterprise customers. "System integrators like Infosys are critical in bridging legacy IT with emerging cloud-native technologies using SUSE OpenStack Cloud," said Ronald de Jong, president, sales, Micro Focus SUSE, in a statement.

Infosys is set to enhance its presence in Europe and generate new business and insights through SUSE OpenStack adoption. In March this year, the Bengaluru-headquartered company expanded its focus towards open source by joining the Open Invention Network (OIN). That decision will help the company persuade clients outside India and make the newly launched private cloud solution successful over time.
