

You can read more about this module at http://docs.ansible.com/ansible/latest/vmware_guest_snapshot_module.html.

Managing clusters

vmware_cluster: This module allows you to manage a cluster in your VMware infrastructure. It also allows you to set various cluster properties such as HA, vSAN and DRS.

The following example will add a sample cluster in a given VMware infrastructure:

```
---
- name: Example playbook to add a cluster
  hosts: localhost
  tasks:
    - name: Add cluster
      vmware_cluster:
        validate_certs: false
        hostname: esxi_hostname_01
        username: root
        password: esxi@123
        datacenter_name: datacenter_01
        cluster_name: esx_cluster_002
        register: new_cluster_details
    - debug: msg=new_cluster_details
```

You can read more about this module at http://docs.ansible.com/ansible/latest/vmware_cluster_module.html.

Managing data centres

vmware_datacenter: This module allows you to manage a data centre in your VMware infrastructure. You can read more about this module at http://docs.ansible.com/ansible/latest/vmware_datacenter_module.html.

Managing VMware networks

You can manage various VMware network objects such as a distributed virtual switch, virtual switch, port group, distributed virtual switch port group, etc.

You can read more about these various modules at http://docs.ansible.com/ansible/latest/list_of_cloud_modules.html#vmware.

Ansible VMware modules are undergoing heavy development; you can take active part in this by developing or testing various modules. You can read more about hacking Ansible modules at <https://github.com/ansible/ansible/blob/devel/hacking/README.md>.
