

“THE ACCEPTANCE OF OPEN SOURCE AMONG INDIAN ENTERPRISES HAS BEEN REMARKABLE”

What are the roadblocks to the success of an open source platform in India? **Rajarshi Bhattacharyya**, country head, **SUSE India**, answers this question in an exclusive conversation with **Jagmeet Singh** of **OSFY**. Edited excerpts...

Rajarshi Bhattacharyya,
country head, **SUSE India**
(Srilanka, Bangladesh and Nepal)

Q How has SUSE grown in India?

Completing 25 successful years feels great! Founded in 1992, SUSE has come a long way in the Linux market. We are constantly involved with the open source community and have many ‘firsts’ to our credit. We were the first enterprise OpenStack Cloud distribution, the first Linux on the mainframe, and also the first Linux to make KVM and Xen available. Besides, we are the primary sponsor of the community-supported openSUSE Project, which develops the openSUSE Linux distribution.

Gone are the days when SUSE was known merely as a distro used by a group of edgy techies. SUSE is now a common name in the IT industry, and that has not happened overnight. The combination of a clear strategy, a strong and buzzing community, innovation beyond what anyone imagined and the conviction to make it big, have made SUSE a success story.

In India, we are growing by double digits, and with open source being at the heart of the Indian government’s IT Policy, we are expanding at a significant rate. SUSE powers the ‘Make in India’ initiative established by the government, by enabling cloud services and value-added service providers with cutting-edge, enterprise-class open source technologies. Moreover, adoption of open solutions from SUSE allows these organisations to build products and solutions that are comparable to their foreign counterparts.

Q Do you see any notable differences between India and developed regions like the US and UK, as an open source solutions provider?

India has a very distinct IT policy which is governed by open standards and actively promotes adoption of open source. So, being an open source
