

Figure 1: Wine downloading

Figure 2: Wine mono installation

Select the **Libraries** tab, then scroll down; select the *Riched20* library from the list and add it. When done, click 'OK'.

Now you have successfully installed Wine.

Installing Microsoft Office on Ubuntu

With the help of Wine, it is extremely easy to run any of your favourite Windows software on Ubuntu. Here are some simple steps to follow after installing Wine on Ubuntu, in order to install Microsoft Office.

Step 1: Run the command given below to configure the Windows environment for 32-bit versions of Office.

```
export WINEPREFIX=$HOME/wine32
```

If you are using a 64-bit system, then just replace '32' with '64' in the command.

Step 2: Run the command given below to enable the settings for Wine:

```
export WINEARCH=win32
```

If you are using a 64-bit system, replace '32' with '64'.
Step 3: Open the Microsoft Office setup, right-click on *Setup.exe* and open with Wine.

Step 4: When the installer opens, click 'Install Now' to begin the installation. Follow the prompts.

Step 5: When you're done with installation of Office,

Figure 3: Wine configuration

restart your computer and open Ubuntu Dash. Search for Microsoft Office to use the suite.

Wine has a number of advantages, some of which are listed below.

1. Wine is better than a VM if you need limited applications. VMs are fine but they may be slower than Wine. VMs need more RAM to run a whole OS, but you can do almost everything in Wine faster than VMs do.
2. You can run almost every .exe file in Ubuntu with some configuration.
3. Wine is a free and open source compatibility layer.
4. It provides a rich software library to developers for running Windows applications.
5. Wine ensures good backward compatibility with legacy Windows applications. **END**
