

Figure 6: Email configuration

Figure 8: Task structure

#	Status
1	Idle
2	Idle

Figure 9: New item

Part B: The open command evokes and sets the *classpath*. While setting the *classpath*, we will set the way *bin* and *libs* are organised:

```
Home index > set classpath=C:\Users\Learnautomation\bin;C:\Users\Learnautomation\libs\*;
```

Part C: Open any Notepad or text editor and write the command

given below, then save it as a *.bat* document.

```
java - cp bin;libs/* org.testng.TestNG testng.XML
```

2. Now we have to make a task in Jenkins which will execute our build. Open Jenkins on a Web browser (<http://localhost:8080>). Click on 'New Item'. Here 'item' is nothing but a task. Give the item's name, select 'Build a free-style software project' and then click on the 'OK' button (Figure 9).

Next, navigate to *Advanced Project Options*, select the utilisation custom work space, and in the index we will determine the project home catalogue. Now determine the *Add Build step*.

Click on the 'Execute Windows batch' command. In the command area, do mention the batch command which we created earlier, and click on *Save* and then *Apply*.

3. We are ready to run the build. Open Jenkins in the Web browser and click on *Build Now*.

4. You can check the build history in the *Console Output* and confirm the outcome. Selenium integration with Jenkins runs the script file every time there is any change in source code or in a situation where code is moving from one environment to another. Jenkins saves information related to execution history and test reports. It's very valuable when running Selenium from Jenkins with your prepared test cases and you can run them using a single click. You can also schedule the test cases using the batch document in Jenkins.

Jenkins and Selenium are the most powerful tools, independently, and when we integrate Selenium in Jenkins the benefits are multiplied. It's advisable to integrate Selenium and Jenkins in your projects to get the maximum from them. If you have any queries, please feel free to write to me. **END**
